

Global Sales Analysis Dashboard Report

This project focuses on analyzing and visualizing sales performance using Power BI. The dashboard provides interactive insights into revenue, profit, discounts, quantity, regional sales distribution, and customer segments. It helps businesses make informed decisions by identifying top-performing areas and sales trends.

Dashboard Overview

Key Dashboard Features

Feature	Description
Sales Trend Analysis	Tracks sales performance over time using line charts.
Country & Region Maps	Displays geographic sales distribution using maps.
KPI Cards	Shows total sales, profit, quantity, and discount values.
Segment Analysis	Compares sales across Consumer, Corporate, and Home Office.
Sub-Category Insights	Highlights best-performing product categories.

The dashboard reveals important business insights such as high-performing regions, customer purchasing patterns, and product category trends. The map visualization helps identify regional sales distribution, while KPI cards provide quick business metrics.

Technologies and Outcome

Tools & Technologies Used:

- Power BI
- Excel / CSV Dataset
- DAX Functions
- Data Cleaning & Transformation
- Business Intelligence Visualization

Project Outcome:

This project demonstrates practical skills in data analysis, dashboard development, business intelligence reporting, and visualization. The dashboard supports decision-making by converting raw sales data into meaningful insights.
